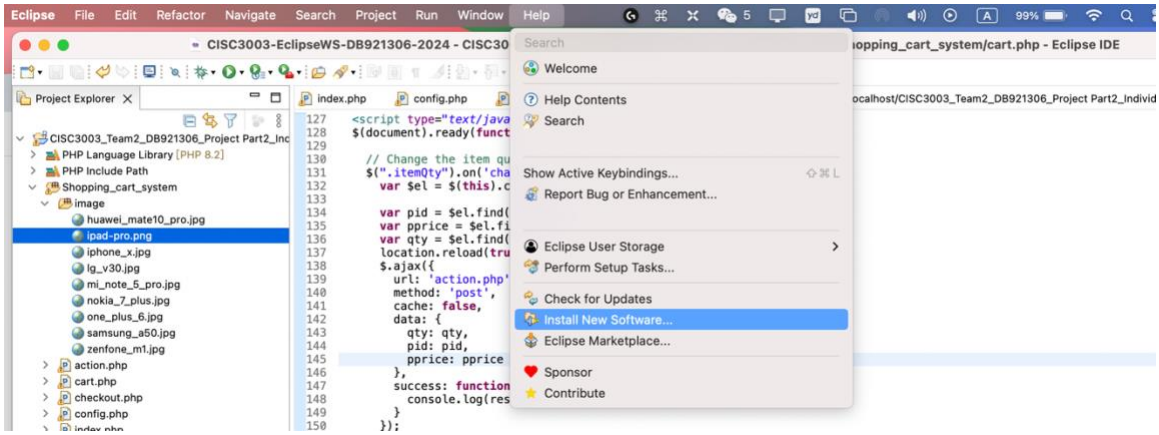
How to configure Eclipse PHP Development Tool(PDT) and XAMPP to run PHP Project?

You can follow the video step:

https://www.youtube.com/watch?v=OE2DE5pXpmw&ab_channel=CodeFlyr

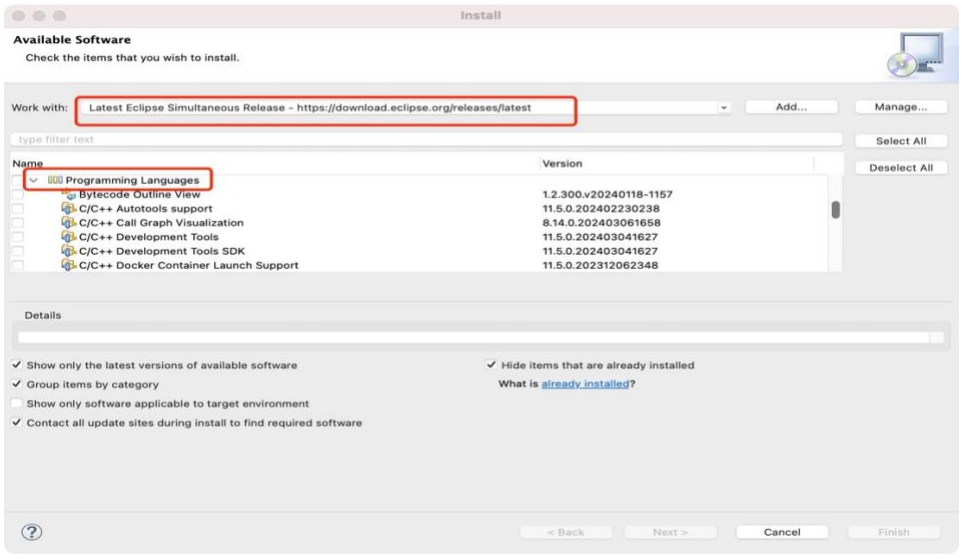
Also you can follow the below of my steps:

Go to "Help", click "Install New Software".

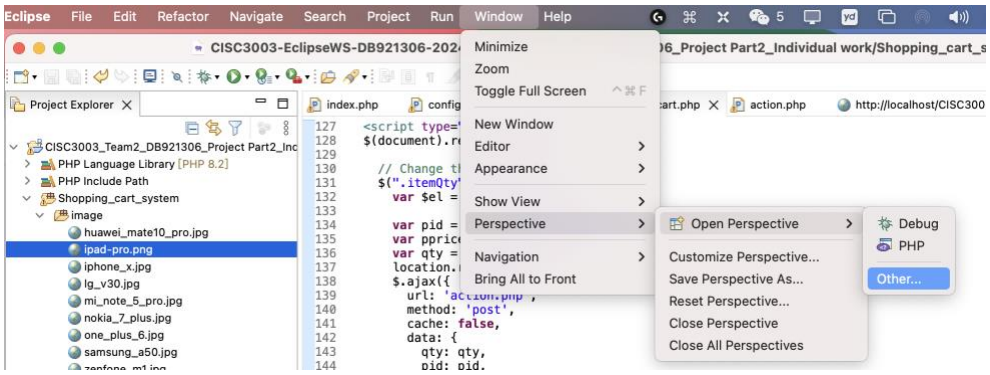


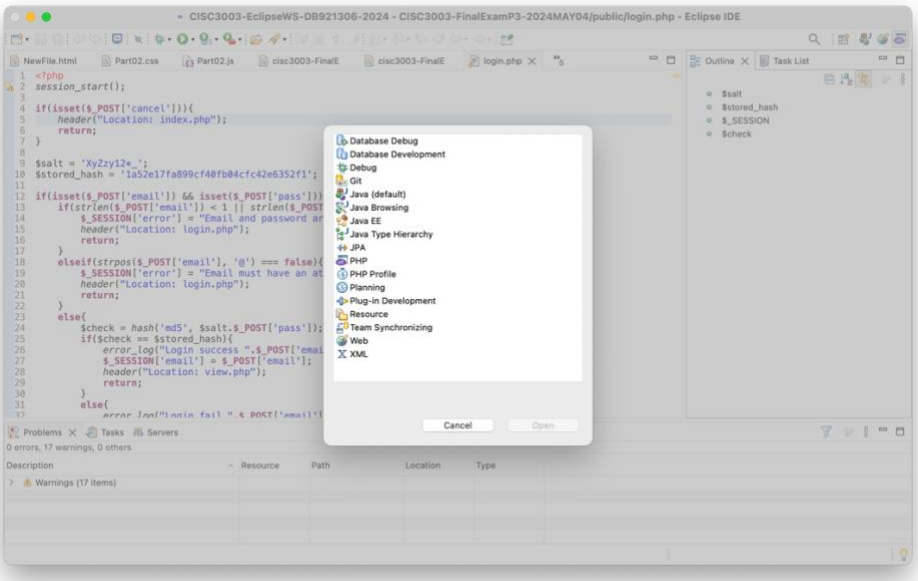
Available Software page: Type "Latest Eclipse Simultaneous Release - https://download.eclipse.org/releases/latest"

Choose "**Programming Languages**" and find all "**PHP Development Tools(PDT)**" then tick it to install.



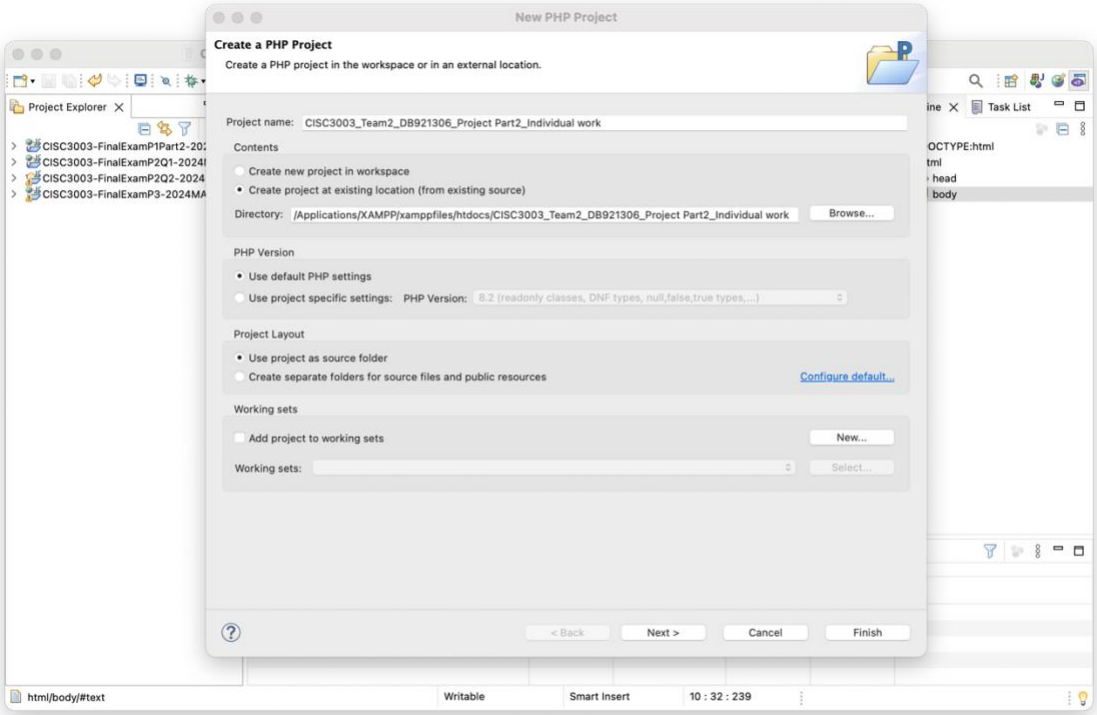
After install then Open perspective: see PHP, successfully install.





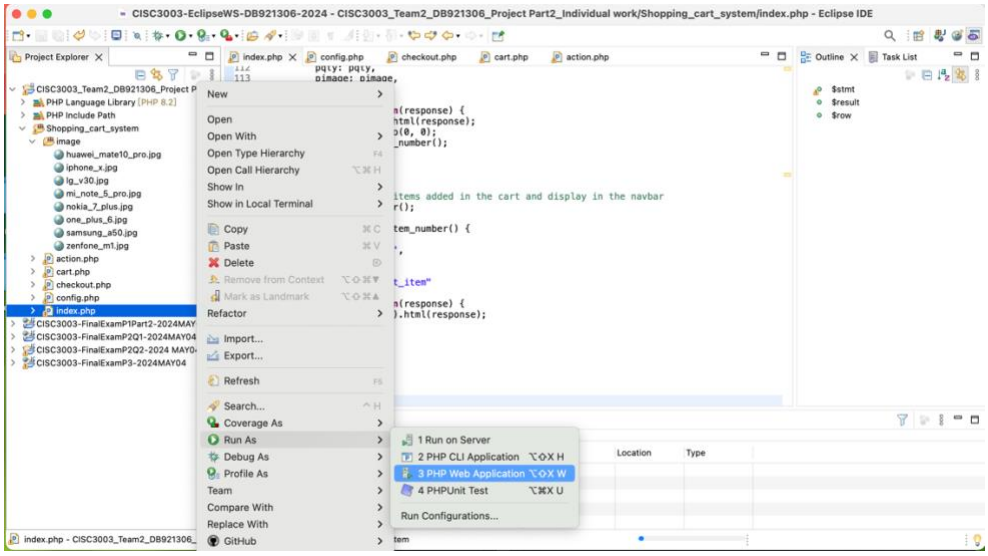
Create PHP Project using XAMPP.

Choose the "Create project at an existing location" and Browse the directory: /Application/XAMPP/xamppfiles/htdocs.(You should replace the actual path of the htdocs file in your computer.)

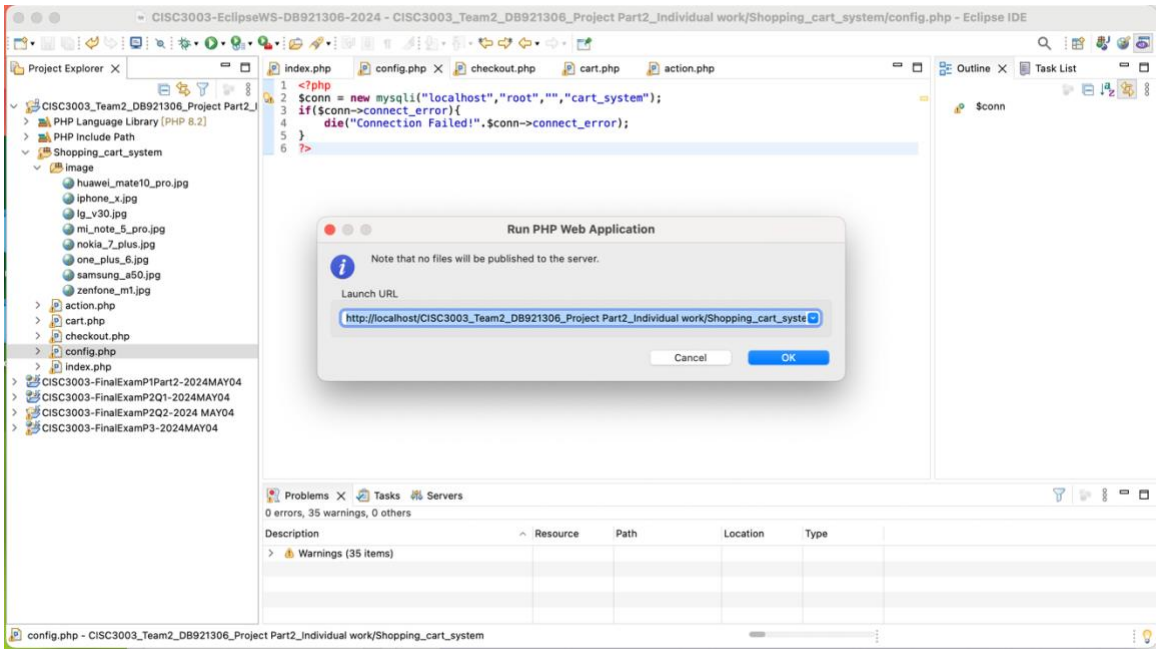


To run php file:

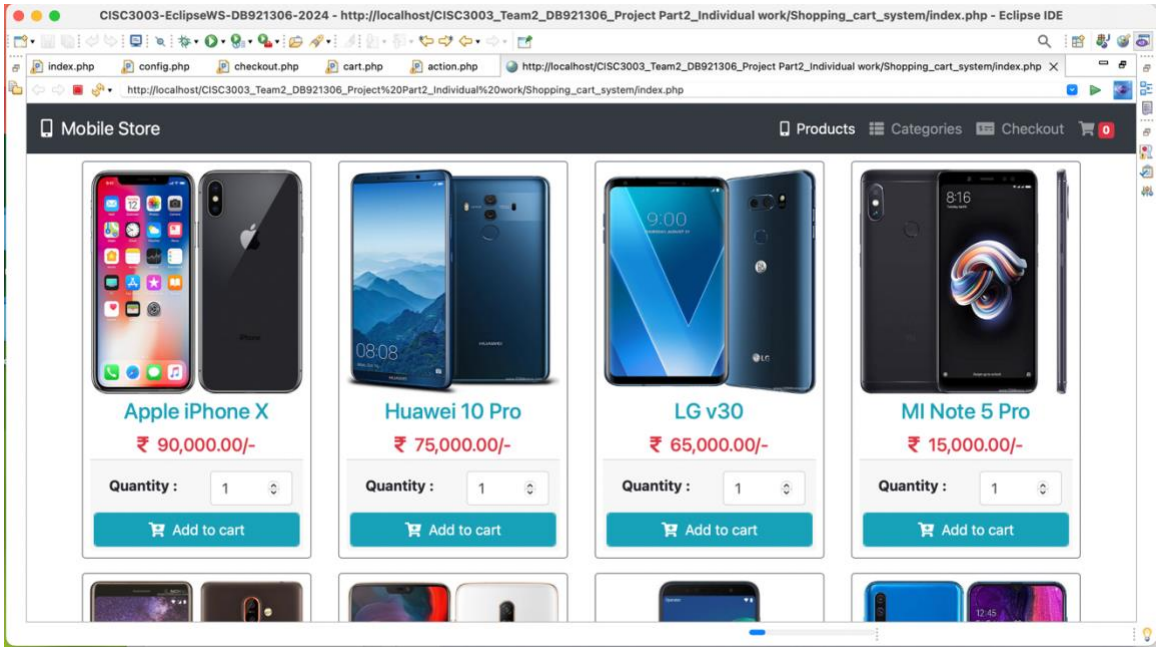
Right click on index.php file ->Right Click "**Run As**" -> Click "**PHP Web Application**"



Click “OK”, then get the rendered page.

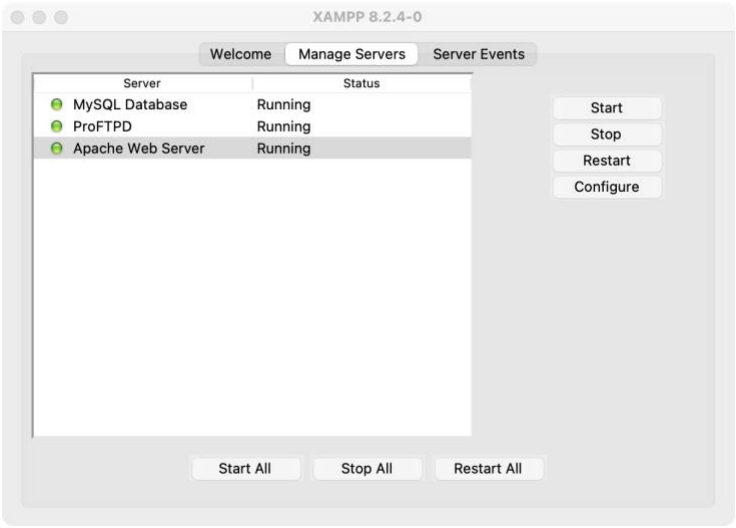


Rendered Page in Eclipse:



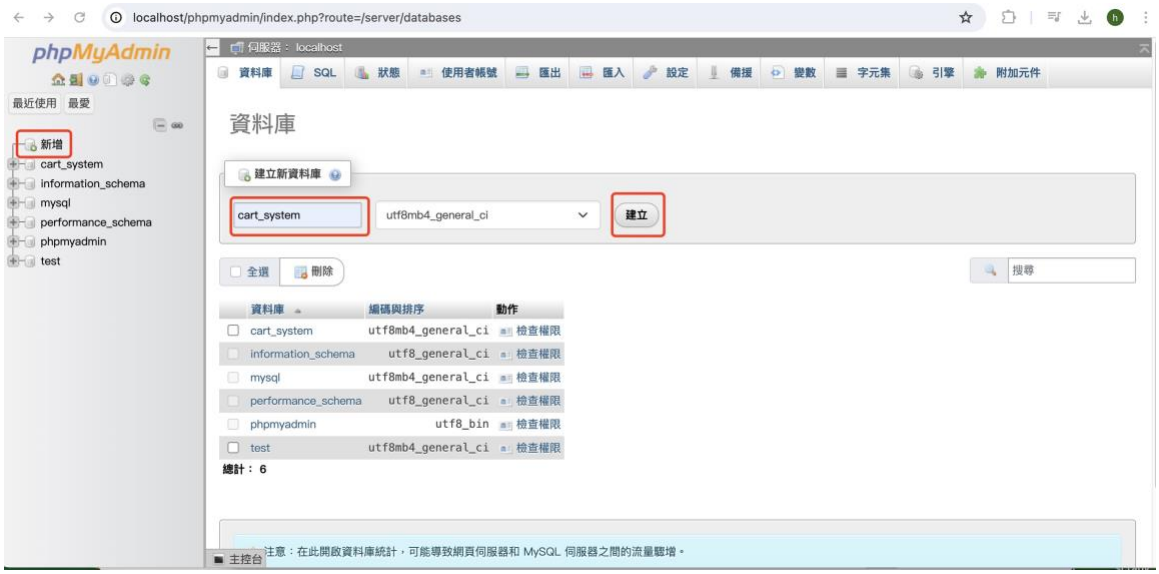
How to create Database and Table?

Start the XAMPP connection first.

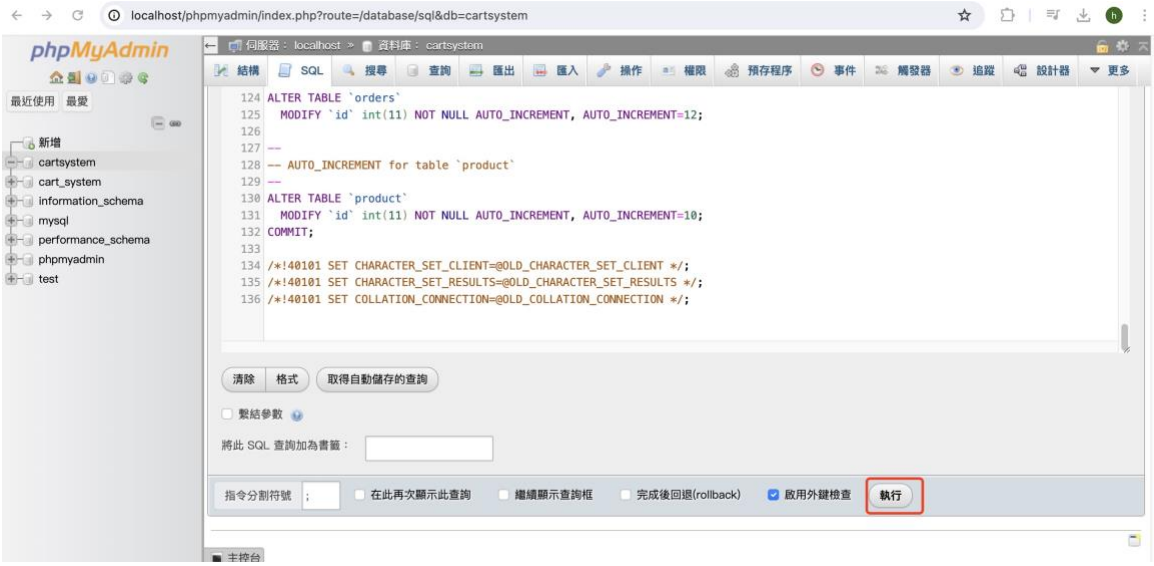


Go to http://localhost/phpmyadmin

Create an empty database first. Name "cart_system".



Copy all the content in the “cart_system.sql”, then paste all the content on SQL of phpMyAdmin and click “Execute”.



Successfully imort the data.

localhost/phpmyadmin/index.php?route=/sql&pos=0&db=cart_system&table=product
phpMyAdmin
